

Product Group: Steel Truck Wheels

Bulletin No: 48

Mullins Wheels has released a new truck wheel - Part No: 710-250 which is suitable for Euro 4 Spec truck applications. The new wheel replaces the 7.5 x 19.5 O.E. wheel.

The new 710-250 wheel has the following specifications:

Size: 8.25 x 19.5 PCD: 8/275 Bore: 221mm Finish: Silver Valve: 405-727

This new wheel allows Euro 4 Spec trucks to run the new load rated 305-70 R19.5 tyres. Goodyear, Bridgestone and Michelin all now have a higher load rated 305-70 R19.5 tyre suitable for Medium-Rigid trucks. These tyres must be fitted onto a 8.25 x 19.5 wheel.

Medium-Rigid trucks are now moving to this size of wheel so that they can fit the new higher load rated tyre. These trucks include: New Isuzu Med, Merc Med-Rigid, Mitsubishi Med-Rigid, Nissan UD Med-Rigid, etc.

The new 710-250 Mullins RoadKing Wheel in 8.25 x 19.5 8/275 specification, can be used on both Steer and Drive Wheel applications on the new Euro 4 Spec trucks.
